

# How to Boost Industrial Safety and Productivity with a “Culture of Clean”

## Step 1.

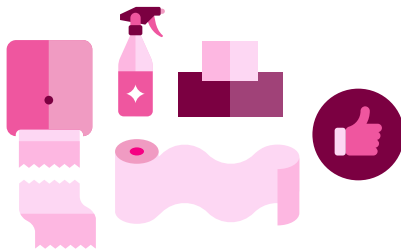

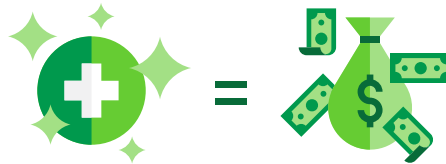

### Create an Organization-Wide Culture of Clean

Policies and programs need to combine clear instructions and expectations – but they should also include corresponding recognition and rewards.

## Step 2.

### Turn Clean into Green

Effective housekeeping can eliminate some workplace hazards and help get a job done safely and properly.

## Step 3.

### Equip Your Employees with the Best Cleaning Tools and Supplies

Without the right tools and processes in place on the production floor, accidents will keep happening, no matter how much safety training you provide.

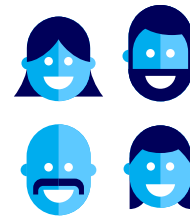

There are several important workplace truisms to observe here:

**Old supplies get old results.** Inefficient shop rags remain a fixture in many work environments. Try replacing them with more **innovative products** like disposable wipers, which research shows **can reduce cleaning and maintenance time by as much as 35%.**

**Healthier workers mean healthy savings.** Keeping employees healthy isn't just the right thing to do – it pays at the bottom line, too. The National Safety Council reports that **“Each prevented lost-time injury or illness saves \$37,000.”**

**Lowering the pressure raises productivity.** It's simple. Providing supplies that help do a job more quickly and easily helps workers get more done, with less stress. **And happier workers are more productive workers.**
